

# FxBridge™ Tuberosity Repair System

Reproducible. Simple. Strong.

- Three distinct suture colors aid in suture management for a simple, reproducible repair
- FiberTape™ suture provides more resistance to tissue pull-through compared to round suture<sup>1</sup>
- FxBridge technique facilitates anatomic tuberosity reduction, which increases tuberosity healing and improves postoperative range of motion<sup>2</sup>
- 135° humeral inclination increases tuberosity healing rate and stability<sup>3-5</sup>
